

For more than a century, GE has led the way with innovative technologies and groundbreaking quality initiatives – literally helping to power the world. Along the way, through the development and delivery of state-of-the-art products and uncompromising service, GE has also built a legacy as a leading supplier of critical power solutions.

To bridge the gap between the traditional utility grid and the needs of today's business, GE offers a complete portfolio of critical power products and services, from desktop Uninterruptible Power Supply (UPS) units to engineered power systems, and from basic UPS and battery maintenance to comprehensive service contracts covering every aspect of your power quality and delivery system.

At GE, our goal is simple – to never let power quality stand in the way of our customers' success. That's why GE is committed to continue developing and delivering

UPS technology for the digital world

After Sales & Service performance through people

Whether you are a large corporation with multiple sites or a small business owner with a single location, GE will enable you to have a constant supply of clean and reliable power to keep your business up and running.

service coverage

GE has local offices in a number of countries around the globe and also a network of selected business partners, whose salespeople and service engineers combine expertise in our solutions with an in-depth knowledge of local market conditions. GE's business partners, located in more than 80 countries around the world, use all that expertise and knowledge to adapt GE's products and services precisely to their customers' needs.

Digital Energy Uninterruptible Power Supplies product overview

5G-CE Series 160-300 kVA

imagination at work

ML Series
1-phase
350-1000 VA

The ML Series is a pluggable, line-interactive UPS offering cost-effective protection against mains power disturbances and failures. The range extends from 350VA to 1000VA, allowing you to protect a single PC or multiple workstations and peripherals.

GT Series
1-phase
6-10 kVA

With the GT Series, your mission-critical equipment is protected from any fluctuation in your power source, enabling you to concentrate on your core activities. The GT Series is a true VFI on-line double conversion, transformerless, intelligent and high performance installable UPS.

SitePro
3-phase
10-40 kVA

The SitePro of high-performance UPS systems provides critical power protection for a range of applications. All SitePro models operate in a double conversion mode (providing true on-line operation), thus providing the highest levels of power reliability.

Match & Match 19"
1-phase
500-3000 VA

The Match and Match 19" are a line-interactive, intelligent and rugged UPS, designed for cost-critical applications. All units are microprocessor controlled and have standard RS232 communications. They are used in a wide range of IT networking and telecommunications applications.

LP 11/31T/31 Series
1-phase
3-20 kVA

The LP Series provide critical power protection for many applications. The LP Series is easy to install and service, optimised for the office environment. The robust design is also suitable for more traditional, industrial applications. The LP Series is an on-line double conversion, intelligent and heavy duty UPS.

SG Series 3-phase
60-500 kVA PurePulse®
600 kVA

GE's SG Series UPS in the range from 60-500 kVA are available with GE's cutting edge PurePulse technology. The 160-300 kVA range is also available with a traditional thyristor-based rectifier.

VH Series
1-phase
700-3000 VA

The VH Series of UPS is a true VFI (Voltage & Frequency Independent) on-line double conversion, intelligent and high-performance UPS designed for all mission-critical applications. Shared tower/rack cabinet and a modern design to suit IT and industrial environment.

LP 33 Series
3-phase
10-120 kVA

The LP 33 Series is a highly reliable transformerless three phase UPS system providing power protection for a wide range of critical applications from medical to datacenters and telecommunication. To further increase system reliability, 2 or more units can be connected in parallel.
